book is rounded out by a good utility program, the CHIP-8
Editor, which you will find useful in loading and examining
the other programs in the book.

Although the programs are valuable in themselves, the wealth
of information Tom has presented with each program listing is
a "graduate course" in VIP programming. Careful reading of
the programs should provide many new insightes into the use
of CHIP-8 and machine language on the VIP. The exhaustive
documentation should allow the reader to modify any of the
programs to meet his special needs or desires. Several of
the programs will be even more valuable if interfaced to an
external keyboard, such as the VP-600 ASCII Keyboard provided
by RCA. Users who make such modifications are invited to
submit them to the VIPER for publication.

All VIP owners are indebted to Tom for opening a new appli-
cation area for the VIP. We look forward to his future efforts.
